

## White Spruce (Picea glauca)

Narrow conical form, 40' to 60' tall and 10' to 20' wide, dense when young, more loose and open with age. Branches held horizontally. Medium growth rate.

Stiff and pointed medium bluish green needles, 0.5" to 0.75' long, on upper-side of branch.

1" to 2.5' long cones towards the ends of branches, cone scales thin and rounded, with smooth margins, light green color turning to a light brown at maturity.

Prefers full sun, well-drained, sandy, acidic soils.

Useful as specimen, windbreak, screen, hedge, Christmas tree, in mass plantings, and along the seashore, because salt tolerant

Native to northern New England and Canada.
